

Squirro and Synaptica provide end-to-end solutions to help you **organize, classify, and discover** the knowledge in your enterprise.

## Taxonomy and Ontology Management

Use Synaptica's Graphite to collaborate in a no-code Taxonomy and Ontology Management System (TOMS) to create ontology schema and manage Single-Source-of-Truth (SSOT) enterprise taxonomies.

## Classification and Extraction

Use Squirro's AI Studio to create human-in-the-loop workflows that automatically classify diverse data sources to enterprise taxonomies, as well as to extract candidate entities and information from content.

## Enterprise Knowledge Graphs

Automatically build a content-aware knowledge graph that maps content to your ontology with machine-inferencing that generates new knowledge from the graph.

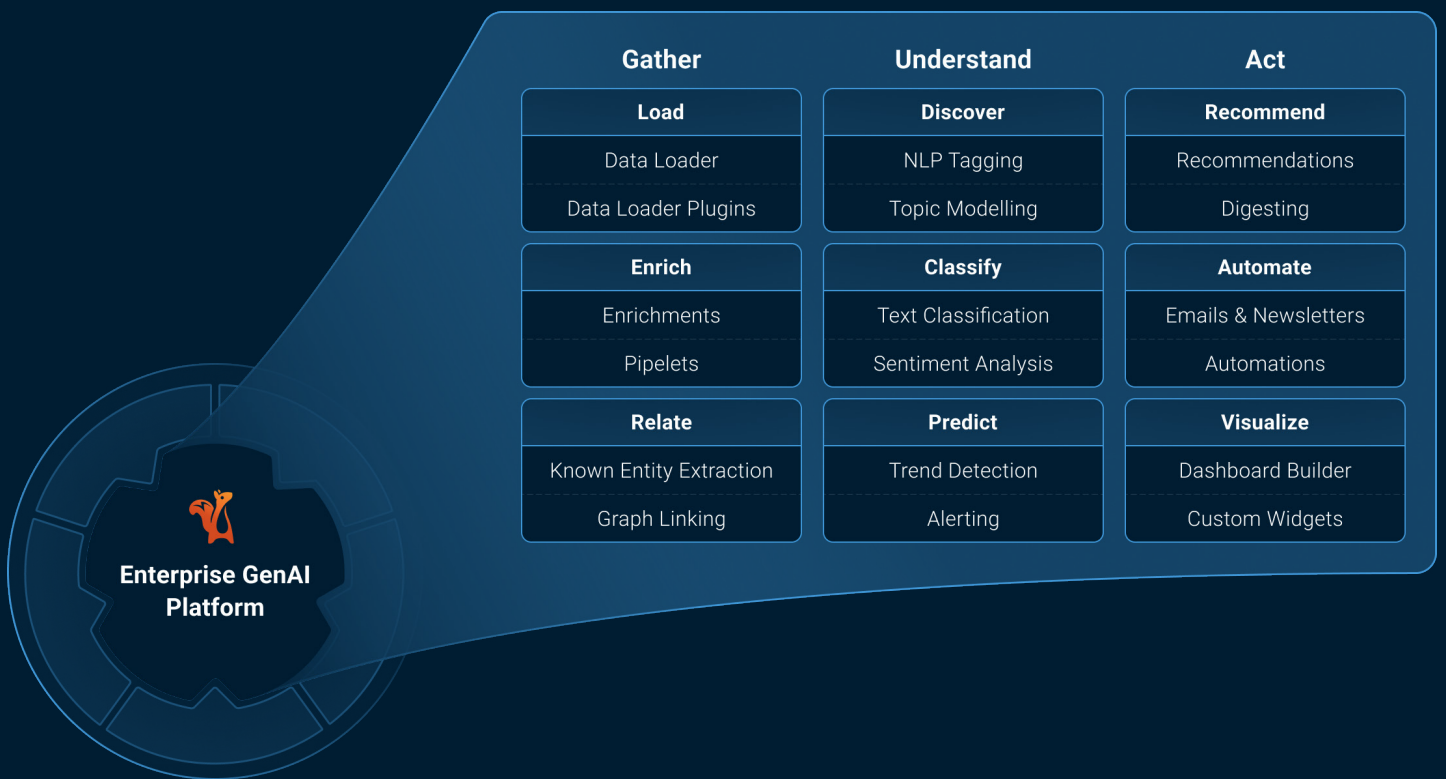

## Semantic Search

Semantic search maps the language of your users to the language of your content, optimizing both precision and recall. Mitigate the risk of missing information, and reduce time wasted on irrelevant results.

## GraphRAG

Combining an enterprise knowledge graph with Squirro's Retrieval Augmented Generation (RAG) stack significantly enhances the accuracy of conversational AI enabling transparent control over business process automation.

## Squirro's Enterprise GenAI Platform
